

Peanuts Are Not Nuts

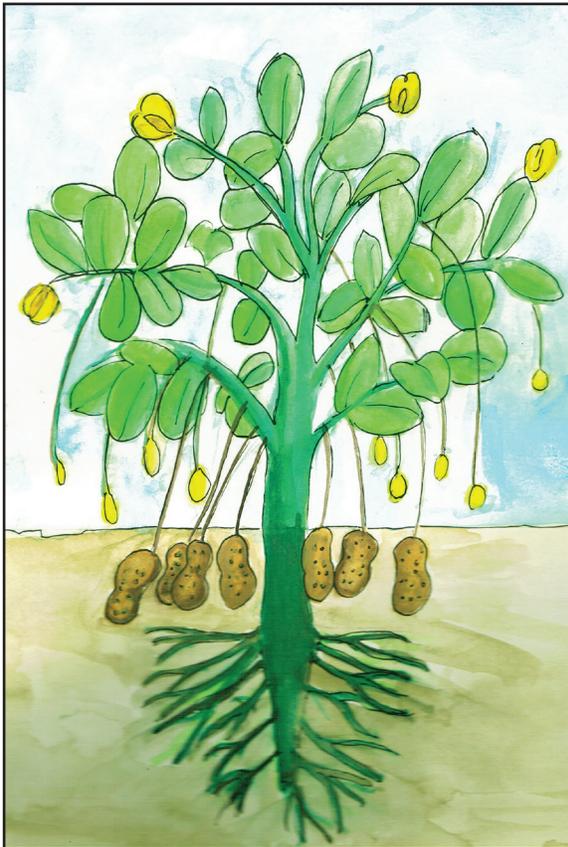

By Mindres (Own work) via Wikimedia Commons

Peanuts are not nuts.

Nuts grow on trees.

Peanuts do not grow
on trees.

They grow from a small plant.

The plant's leaves and its little
yellow flowers grow above
the ground.

But the peanuts grow
underground.

To pick the peanuts, you must
pull out the whole plant.

Peanuts are legumes, not nuts.

Legumes are beans, so
peanuts are a kind of bean.

A peanut shell is a seedpod.

It has two seeds.

Each seed is a peanut.
